

International Science and Technology Consortium

The General Charter

An Ideological Manifesto for the Future of Science, Education, and Society

Geneva – 2026

OUR CONVICTION

We stand at the historic intersection of humanity and Society 5.0. Digitalization, advanced Artificial Intelligence, and biotechnology are no longer just tools—they are the new infrastructure of human civilization.

Yet, traditional academia remains isolated, trapped in rigid structures detached from the speed of the real economy. We believe that the old paradigm of education and science is broken. Knowledge can no longer be locked in ivory towers; it must flow fluidly into creation, impact, and value.

The Sci&Tech Consortium is not merely an association; it is a transnational movement to collapse the gap between human talent, scientific discovery, and global technological execution.

OUR VALUES: THE FIVE PILLARS OF INTEGRITY

1. We reject one-size-fits-all education. Through advanced EdTech and AI, we commit to liberating individual talent, creating adaptive, customized pathways tailored to the specific destiny and strength of every learner.
2. Knowledge without application is hollow. We champion Project-Based Learning and Dual Education. Our students and scientists learn by doing, creating solutions that directly challenge real-world industrial and societal crises.
3. We do not research for the sake of shelves. We build an agile launchpad where DeepTech scientific breakthroughs are seamlessly and rapidly institutionalized, commercialized, and scaled into independent spin-offs.

4. Genius has no nationality. We break physical and systemic borders. We ensure that credits, skills, human capital, and research data flow seamlessly through our global internal network, built on absolute mutual trust.
5. We replace rigid central bureaucracies with a decentralized, trusted network of autonomous partners. We use modern distributed technology to secure data, foster transparent cooperation, and ensure institutional agility.

THE "UNIVERSITY 5.0" MANIFESTO

We proclaim the birth of University 5.0—a fluid, hybrid, and continuous ecosystem.

- Bridging the physical campus with immersive digital spaces.
- Utilizing Artificial Intelligence not to replace, but to elevate and tutor human potential.
- Measured exclusively by the real, tangible value it yields for human progress and sustainable development.

OUR PLEDGE TO INNOVATORS: FOUNDER-FRIENDLY FIRST

The Consortium stands unconditionally on the side of the creator. We officially declare a "Founder-Friendly" approach. Students, researchers, and young innovators within our ecosystem retain the primary rights to their intellectual property, startups, and prototypes. We exist to protect, mentor, and fuel the creator — never to possess them.

THE MISSION

Our ultimate mission is to harmonize academic knowledge, technological entrepreneurship, and flexible capital into a force for global good. We commit to continuous reinvention, to challenging outdated institutional concepts, and to ensuring that technological advancement serves the absolute advancement of humanity.
